

CB-4 Adjustable Coil Bolt

The CB-4 Adjustable Coil Bolt consists of a length of Coil Rod with a Coil Nut welded on one end and a free running Coil Nut on the threaded section. This unit simplifies ordering on projects where unusual forming conditions require numerous bolt lengths. The Adjustable Coil Bolt is available in 1/2" and 3/4" diameters in standard 18" and 24" lengths. Other diameters and lengths are available on special order.
