

Short Hook-Lift Edge Anchor

The 8" Short Hook-Lift Edge Anchor is similar to the face lift anchor, but designed to handle stresses involved in thin concrete sections.

More and more utility precasters are requesting clutchless anchor systems like the Hook-Lift Edge Anchor. Our new 8" Short Hook-Lift Edge Anchor is an effective, safe and economical solution when higher capacity anchors are not needed. With identical functionality as the Hook-Lift Edge Anchor, the short anchor (used with the 79URM or 79URC-1) can be cast into 5" thick concrete sections to be used in tension only (not designed for shear load).

Features of the Short Hook-Lift Edge Anchor:

- Low cost anchor for lessor capacity requirements used in tension as thin as 5" wall applications
- Clutchless: 5 ton hook (max) will fit into void around the anchor
- 3,250 lbs in tension in 4,000 psi concrete
- 5/8" square bar material
- Available in plain or galvanized steel
- Reusable and disposable voids available
- Magnetic and non-magnetic mounting plates available for recesses
- Longer edge lift anchors are available

Item Number	Description	Unit Weight
79UELS	Short Hook-Lift Edge Anchor	2.2 lbs
